23. Contact & Support — Support Channels, Maintenance Protocols

1. Introduction

1.1 Purpose of the Admin Panel

The CliqueHA Admin Panel serves as the centralized management center for the multi-tenant SaaS ticketing system. While tenant portals and agent workspaces handle day-to-day ticket responses within isolated corporate boundaries, the Admin Panel grants global oversight and administrative control across all registered tenants, licenses, subscription plans, system SLAs, and AI copilot services.

1.2 System Overview

The architecture isolates tenant data at both logical and relational levels. Features include multi-distributor license key generation, custom SLA escalation policies, real-time telemetry analytics, automated PDF report rendering, and an integrated OpenAI-powered AI Copilot Assistant capable of voice transcript processing and instant system navigation.

1.3 Administrator Responsibilities

- **Tenant Provisioning & Management:** Overseeing tenant creation, plan assignments, seat allocation, and lifecycle states (Active, Suspended).
- **License & Distributor Governance:** Issuing 25-character license keys to distributors and monitoring expiration windows.
- **Platform Security & Auditing:** Monitoring global audit logs, administering admin credentials, and maintaining strict security standards.
- **System Health Maintenance:** Managing global announcements, SMTP email dispatch gateways, AI engine status, and scheduled maintenance modes.

2. Logging In & Security

2.1 Accessing the Sign-In Screen

To access the global administration portal, open a secure browser session and navigate to /admin (e.g. `https://your-domain.com/admin`).

Default Administrator Credentials:

- **Email:** `admin@example.com`
- **Password:** `password`

2.2 Forgot Password & Recovery

If an administrator forgets their password: 1. Click **Forgot Password?** on the login screen. 2. Enter the administrator's registered email address. 3. Follow the secure token link dispatched to your inbox to reset your credentials. Alternatively, run `php artisan ai:restore-admin` via CLI.

2.3 Secure Logout

Always terminate active sessions when leaving work stations unattended by clicking your admin profile avatar at the bottom-left sidebar or top navigation header and selecting **Logout**.

3. Dashboard Overview & Telemetry

The Admin Dashboard provides real-time telemetry metrics updated automatically across the SaaS environment.

Dashboard Widget	Metric Telemetry	Administrative Relevance
Total Licenses	Count of all issued keys	Monitors key generation volume & reseller distribution.
Active Tenants	Un-suspended active accounts	Indicates current customer organization volume.
Distributors	Registered partner resellers	Tracks channel partner network growth.
Plans Overview	Starter, Business, Enterprise	Monitors active subscription tiers.
Tickets Today	24-hour volume count	Measures real-time support load across all tenants.
AI Health Status	OpenAI API & Circuit Breaker	Verifies operational status of AI assistance modules.

Best Practice: Check the *License Expiration Alerts* card on the dashboard daily to identify tenants reaching key expiration within 30 days.

4. Licensing Module

4.1 License Lifecycle & Keys

Licenses govern tenant seat allocations, plan tiers, and validity windows. License keys follow the 25-character formatted standard: CLIQ-XXXX-XXXX-XXXX-XXXX.

4.2 Issuing a License Key

1. Navigate to **Business ? Licenses**.
2. Click **Create New License**.
3. Select the target **Distributor** and **Subscription Plan**.
4. Set the **Max Seats** (maximum user accounts allowed for the tenant).
5. Specify duration in days (e.g. 365 for 1 year).
6. Click **Generate License**.

4.3 Expiration & Revocation

When a license expires, the tenant automatically shifts into read-only access mode until renewed. Clicking **Revoke** immediately disables the key and suspends tenant portal access.

5. Distributor Management

5.1 Adding & Editing Distributors

Distributors act as partner entities managing license key allocations. To add a distributor: 1. Navigate to **Business ? Distributors**. 2. Click **Add Distributor**. 3. Enter Organization Name, Contact Email, Phone Number, and Status. 4. Click **Save Distributor**.

6. Subscription Plans

Plan Name	Seat Capacity	Monthly Ticket Cap	Included Features
Starter	5 Users	100 Tickets/Mo	Core Ticketing, Knowledge Base, Email Alerts
Business	15 Users	500 Tickets/Mo	SLA Rules, AI Copilot, Custom Departments
Enterprise	Unlimited	Unlimited	Custom Branding, Dedicated AI Models, Priority SLA

7. Tenant Management

7.1 Provisioning Tenants

To provision a new corporate client: 1. Navigate to **Workspace ? Tenants**. 2. Click **Add Tenant**. 3. Enter Organization Name, Subdomain/Slug, and initial Tenant Owner email address. 4. Select Subscription Plan and click **Create Tenant**.

7.2 Account Suspension & Impersonation

- **Suspension:** Click **Suspend Tenant** to block tenant access due to non-payment or policy breach.
- **Impersonation:** Click **Impersonate Tenant** to log into the tenant dashboard as an admin for technical assistance. Click *Stop Impersonation* to return.

8. Global User Management

The User Management screen (**Workspace ? Users**) lists every user account registered across all corporate tenants. Administrators can reset passwords, reassign roles ('Admin', 'Agent', 'Client'), or deactivate accounts.

9. SLA Policies & Escalations

Service Level Agreements enforce target response and resolution deadlines based on ticket priority levels.

Priority	First Response Target	Resolution Target	Escalation Rule
Low	24 Hours	72 Hours	Agent Reminder Notification
Medium	8 Hours	24 Hours	Notify Team Supervisor
High	2 Hours	8 Hours	Escalate to Department Manager
Critical	30 Minutes	2 Hours	Immediate SMS & Global Admin Alert

10. Reports & Analytics

Access aggregated performance metrics under **Analytics ? Reports**. Filter by date ranges or tenant categories, then export data in **CSV** or printable **PDF** formats.

11. Audit Logs & Compliance

Every critical administrative action, login event, and permission modification is immutably logged in **Analytics ? Audit Logs** with exact timestamps, user IDs, and IP addresses.

12. System Settings & Branding

- **General Branding:** Upload global logos and customize platform header titles.
- **SMTP Configuration:** Configure outbound mail servers (Host, Port, SSL/TLS, Encryption keys).
- **Maintenance Mode:** Enable to display a maintenance banner and temporarily restrict public access.

13. Admin Users

Manage global administrative accounts under **Administration ? Administrators**. Assign super-admin permissions, reset admin passwords, and enforce security policies.

14. System Announcements

Create system-wide notices under **Operations ? Announcements**. Set announcement severity to Info, Warning, or Danger to broadcast banners across all tenant dashboards.

15. User Feedback

Review customer satisfaction scores and feedback submissions from tenant administrators under **Help ? User Feedback**.

16. AI Bugs & Diagnostics

Inspect automated error trace reports and diagnostic summaries generated by the AI diagnostic pipeline under **AI ? AI Diagnostics**.

17. Help & Tutorials

Access embedded interactive guides, feature walkthroughs, and knowledge base documentation under **Help ? Help Center**.

18. Notification Center

Click the top header bell icon to view unread SLA breach alerts, license expiration warnings, and critical system events.

19. AI Assistant & Copilot

Launch the AI Assistant from the bottom-right floating widget or via **AI ? Chat**.

- **Voice Input (Web Speech API):** Click the microphone icon to speak your administrative query.
- **Export Conversation:** Export chat transcripts as ****JSON****, ****CSV****, or ****HTML****.

20. Security Best Practices

Security Mandate: 1. Always change default administrator passwords immediately upon deployment.

2. Require all administrators to use passwords exceeding 12 characters with mixed symbols.

3. Review active super-admins under *Administration ? Administrators* monthly.

21. Troubleshooting Guide

Symptom	Probable Root Cause	Recommended Action
Login Failure	Incorrect password or missing user.	Run <code>php artisan ai:restore-admin</code> via CLI to restore defaults.
Tenant User Exceeded	Max seats quota reached.	Edit license seat allocation in Business ? Licenses .
Emails Not Sending	SMTP settings misconfigured.	Verify mail server host/port in Administration ? Settings .
AI Copilot Offline	API key unconfigured.	Set key in AI ? AI Settings .

22. Frequently Asked Questions (20+ Administrator FAQs)

1. How do I log into the Admin Panel for the first time?

Navigate to `/admin` and enter `admin@example.com` with password `password`.

2. How do I add a new corporate tenant?

Go to **Workspace ? Tenants** and click **Add Tenant**.

3. What happens when a license expires?

The tenant shifts into read-only mode until a renewed key is applied.

4. Can I log into a tenant workspace for troubleshooting?

Yes, click **Impersonate Tenant** on the tenant detail page.

5. How do I export audit logs for compliance?

Go to **Analytics ? Audit Logs** and click **Export CSV**.

6. How do I update platform branding and logos?

Navigate to **Administration ? Settings** and upload new branding assets.

7. How do I issue a license key valid for 1 year?

In **Business ? Licenses**, set Duration to 365 days.

8. Where are SLA response targets configured?

Go to **Operations ? SLA Policies**.

9. How do I send a maintenance broadcast to all users?

Create a new announcement under **Operations ? Announcements**.

10. Can I cap tenant monthly ticket creation?

Yes, configure ticket quotas under **Business ? Plans**.

11. How do I create an additional Administrator?

Go to **Administration ? Administrators** and click **Add Administrator**.

12. What is a Distributor account?

A channel partner authorized to allocate and manage license keys.

13. How does the AI Copilot help administrators?

It provides system navigation, telemetry summaries, and automated resolution tips.

14. How do I export AI conversation history?

Click **Export** in the AI chat workspace to download JSON, CSV, or HTML format.

15. Does voice input require external software?

No, it uses your browser's native Web Speech API.

16. How do I enable global Maintenance Mode?

Toggle Maintenance Mode under **Administration ? Settings**.

17. Where do I check AI engine health?

Navigate to **AI ? AI Usage** or **AI Diagnostics**.

18. Can I suspend a non-paying tenant?

Yes, click **Suspend Tenant** under **Workspace ? Tenants**.

19. How do I open global search?

Press `Ctrl + K` (or `Cmd + K` on Mac).

20. What command restores admin access if locked out?

Execute `php artisan ai:restore-admin` in terminal.

21. Is tenant data isolated across subscriptions?

Yes, logical and database queries are strictly scoped per tenant ID.

23. Contact & Support

For enterprise escalation, system maintenance support, or licensing assistance:

- **Support Portal:** <https://cliqueha.com/support>
- **Email Escalations:** support@cliqueha.com
- **Documentation Updates:** Updated quarterly with every major release.
