ENTERPRISE MULTI-TENANT SAAS PLATFORM

System Administrator Operations & Governance User Manual

Official Master Step-by-Step Operations & Governance Guide for Global Administration, Multi-Tenant Provisioning, License Minting, SLA Compliance Control, and AI Assistant Management.

Platform Release: v2.4.0 (Enterprise Suite)

Generated Date: July 30, 2026

Target Interface: Global Admin Panel
(/admin)

Document Control: Official Master Guide

Authoring Team: Platform Operations & Engineering

Security Level: Restricted — System Administrator
Only

Table of Contents

1.	Introduction & System Architecture — Purpose, Scope, Tenant Isolation & Governance
2.	Authentication & Security Operations — Administrator Sign-In, Session Security & Logout
3.	Executive Dashboard Telemetry — Real-Time Telemetry Cards & Global Navigation Menu
4.	Tenant Management & Provisioning — Tenant Directory, Creation Form, Editing, Suspension & Deletion Safeguards
5.	Global User Management & Roles — Account Directory, User Provisioning, Credential Edits & Status Toggles
6.	Subscription License Key Minting — Key Minting Form, Expiration, Distributor Binding, Revocation & Reactivation
7.	Subscription Plan Governance — Plan Tiers Directory, Create/Edit Forms, Seat Limits & Feature Flags
8.	Distributor & Reseller Partner Network — Reseller Directory, Partner Registration, Quotas & Channel Metrics
9.	SLA Policies & Command Center — Health Dashboard, Policy Registry, Response Target Config & Audit Exports
10.	System Notification Center — Security Alerts, SLA Breach Warnings & Notification Filtering
11.	AI Assistant & Copilot Intelligence — Interactive Chatbot, Telemetry Prompts, Formatted Code Blocks & Diagnostics
12.	System Settings & Global Parameters — Application Configuration, Branding, SMTP Parameters & Maintenance Mode
13.	Help Center & Interactive Tutorials — Tutorial Directory, Detailed Walkthroughs & Manual PDF Download
14.	System Announcements & Broadcasts — Global Banners, Severity Tiers & Audience Scheduling
15.	Bug Reports & Platform Feedback Audit — Issue Triage, Developer Escalations & CSAT Rating Audits

1. Introduction & System Architecture

1.1 Purpose & Enterprise Multi-Tenant Scope

The CliqueHA Admin Panel serves as the central control plane for managing the multi-tenant SaaS ticketing infrastructure. While individual corporate tenants operate within isolated tenant portals for daily customer support, the Global Administration Portal (/admin) grants complete administrative authority across all registered corporate tenants, users, license keys, SLA policies, reseller partnerships, and AI copilot services.

1.2 System Architecture & Tenant Isolation

The platform enforces strict logical data isolation across corporate tenants. Each tenant workspace is bound to a unique domain/slug, dedicated database scoping rules, and subscription entitlements. System Administrators oversee global infrastructure health, issue cryptographically signed license keys, configure SLA response thresholds, manage global announcements, and perform cross-tenant analytics.

IMPORTANT SECURITY NOTICE: Actions performed within the Global Admin Panel affect all tenant organizations platform-wide. Administrators must adhere to least-privilege operational guidelines and verify all destructive actions before execution.

2. Authentication & Security Operations

2.1 Administrator Sign-In Operations

Access to the global administration workspace is restricted to authorized administrator accounts. Follow the step-by-step procedure below to authenticate into the system.

Step 1: Navigate to the Authentication Gateway

Open your browser and navigate to `http://your-domain.com/admin/login` or `/login`.

Figure 1: Platform Login Screen

Interface Description: The sign-in portal features input fields for your Administrator Email and Password, a "Remember Me" session persistence toggle, and brand validation branding.

Step 2: Enter Credentials & Submit

Field Name	Type / Requirement	Description & Validation Rules
Email Address	Required / Valid Email	Your registered administrator email address (e.g., admin@example.com).
Password	Required / Minimum 8 chars	Account authentication password. Must meet platform complexity requirements.
Remember Me	Optional Checkbox	Extends session cookie duration for up to 30 days on trusted administrative devices.

Step 3: Verification & Dashboard Redirection

Click **Sign In**. Upon credential validation, the system verifies your administrator role flags and redirects you directly to the Executive Dashboard.

Figure 2: Successful Administrator Login & Workspace Redirection

Expected Result: A success notification appears, and the platform loads the main executive dashboard telemetry view.

SECURITY NOTE: Five consecutive failed sign-in attempts will temporarily lock out the account IP address for 15 minutes to prevent brute-force attacks.

3. Executive Dashboard Telemetry

3.1 Executive Dashboard Telemetry Overview

The Admin Dashboard provides real-time telemetry across all platform operations, tenant activity, support ticket volumes, and SLA performance.

Figure 3: Dashboard Overview & Real-Time Telemetry

Figure 4: Global Sidebar Navigation Bar

3.2 Key Telemetry Metrics Breakdown

Telemetry Widget	Description & Purpose	Operational Target
Active Tenants	Total count of active registered corporate tenant organizations currently provisioned.	Monitor multi-tenant platform expansion.
Active Users	Total active global user accounts across all tenant organizations and admin roles.	Track platform concurrency & seat utilization.
Active Licenses	Currently minted and active enterprise subscription license keys in circulation.	Verify license compliance & expiration health.
Total Tickets	Aggregated support ticket volume logged across all tenant workspaces.	Assess global support workload demands.
SLA Compliance	Percentage of tickets resolved within mandated SLA response & resolution deadlines.	Target: Maintain ? 98.5% compliance.

4. Tenant Management & Lifecycle Governance

4.1 Tenant Directory Overview

The Tenant Management workspace enables administrators to provision, configure, monitor, suspend, or decommission tenant organizations across their complete lifecycle.

Step 1: Access Tenant Directory

Navigate to **Workspace ? Tenants** using the left navigation sidebar.

Figure 5: Tenant Directory Management Page

Key Interface Elements: Search Bar, Plan Filter Dropdown, Status Filter (Active / Suspended), Tenant Table (ID, Name, Domain, Plan, Users, Status, Actions), and "Create Tenant" Action Button.

Step 2: Provision a New Workspace Tenant

Click the **Create Tenant** button in the top right header to open the provisioning form.

Figure 6: Provision New Tenant Workspace Form

Form Input Field	Required / Type	Description & Validation Rules
Company / Tenant Name	Required / Text	Official corporate entity name (e.g., Acme Enterprises). Must be unique.
Domain Slug	Required / Alphanumeric	Subdomain identifier (e.g., acme for acme.domain.com). Lowercase only.
Tenant Owner Email	Required / Email	Primary contact email for the initial Tenant Owner account. Receives welcome credentials.
Subscription Plan	Required / Select	Select plan tier (Starter, Business, Enterprise). Dictates seat capacity & feature flags.
Max Seat Capacity	Required / Integer	Maximum agent seats allocated to this tenant (e.g., 50). Must be ≥ 1 .

Step 3: Edit Tenant Information & License Plan

To update an existing tenant's parameters, click the **Edit** icon on the tenant table row.

Demo Company demo-company	Starter	2 / 10	Active	Jul 28, 2026	View Edit Delete

Figure 8: Tenant Administrative Action Controls

- **Log in as Tenant (Impersonation):** Temporarily switch identity into the tenant workspace to troubleshoot tenant issues directly without requesting user passwords.
- **Suspend / Unsuspend:** Immediately freeze or restore tenant portal access for billing or compliance reasons.
- **Update Seat Allocation:** Increase or decrease allocated user seat capacity dynamically.

Step 5: Deleting a Tenant Workspace

To delete an inactive or terminated tenant, click **Delete**. The system opens a security confirmation modal.

Figure 9: Tenant Deletion Confirmation Modal with Related Record Safeguards

DELETION SAFEGUARD: Deleting a tenant permanently removes all associated support tickets, departments, categories, and client accounts. This action is irreversible.

5. Global User Management & Roles

5.1 Account Directory & Role Matrix

Manage all system user accounts across administrative and tenant scopes. The system enforces role-based access control across four principal tiers: Super Admin, Tenant Owner, Support Agent, and Client User.

Step 1: Access Global User Directory

Navigate to **Workspace ? Users**.

Figure 10: Global User Directory

Step 2: Provision a New Global User Account

Click **Create User** to launch the user provisioning form.

CREATE ADMIN USER

Figure 11: Create New Global User Form

Field Name	Type / Requirement	Description & Purpose
Full Name	Required / Text	User's first and last name (e.g., Sarah Jenkins).
Email Address	Required / Unique Email	System sign-in email address and notification destination.
Password	Required / Secret	Initial account password. System prompts user to reset upon first login.
Role Assignment	Required / Dropdown	Assign role (Super Admin, Tenant Admin, Agent, Client).
Tenant Binding	Conditional / Select	Select assigned corporate tenant workspace (N/A for Super Admins).

Step 3: Edit User Credentials & Role Allocations

Click **Edit** on any user row to adjust account details or reset credentials.

6. Subscription License Keys & Minting

6.1 License Directory & Minting Operations

Issue, track, and bind enterprise subscription license keys (LIC-XXXX-XXXX) to corporate tenants and reseller distributors.

Step 1: Access License Key Directory

Navigate to **Billing ? Licenses**.

Figure 14: Enterprise License Key Directory

Step 2: Generate & Issue New License Key

Click **Generate License Key** to open the key minting form.

9. SLA Policies & Command Center

9.1 SLA Health Command Center Dashboard

Monitor real-time SLA compliance across all support tiers, track warning thresholds, and prevent SLA breaches.

Figure 24: SLA Health Command Center Dashboard

9.2 SLA Policy Registry & Response Target Configuration

Figure 25: SLA Policy Registry Overview

Step 1: Configure Response & Resolution Targets

Click **Create Policy** to establish response time targets per priority.

Figure 26: Configure SLA Policy Targets Modal

Priority Tier	First Response Target	Resolution Target	Escalation Trigger
Urgent	15 Minutes	2 Hours	Escalate to Tier 3 Lead at 50% time elapsed
High	1 Hour	8 Hours	Escalate to Senior Agent at 75% time elapsed
Normal	4 Hours	24 Hours	Warning alert to assigned team at 80% time
Low	12 Hours	72 Hours	Standard queue monitoring

Step 2: Edit Tier Response Targets & Escalation Rules

Figure 27: Edit SLA Target Response Times & Tier Escalation Rules

10. System Notification Center

10.1 Centralized System Notification Management

Monitor security alerts, SLA breach warnings, license expiration notices, and system health status.

Figure 28: System Notification Center Workspace

Step 1: Filtering & Marking Notifications Read

Figure 29: Filter Alerts & Mark Notifications Read

11. AI Assistant & Copilot Intelligence

11.1 AI Assistant Chat Workspace & Diagnostics

Engage with the embedded AI Copilot assistant to run platform diagnostics, query real-time telemetry metrics, format code solutions, and export chat transcripts.

Figure 30: AI Assistant Workspace & Chat Interface

Step 1: Submitting Operational Prompts

Type natural language queries in the prompt input field and click **Send**.

Figure 31: Submitting Telemetry Prompt to AI Copilot

Step 2: Analyzing AI Responses & Code Blocks

Figure 32: AI Assistant Formatted Response with Code Blocks

Step 3: AI Analytics, System Health Diagnostics & Playground

Figure 33: AI Analytics & Prompt Playground Workspace

SAFETY SAFEGUARD: Potentially destructive AI commands (e.g., tenant deletion or bulk status modifications) require manual administrator confirmation before execution.

12. System Settings & Global Parameters

12.1 Application Configuration & Maintenance Mode

Manage global application branding, SMTP mail gateway credentials, default localization parameters, and maintenance mode toggles.

Figure 34: System Settings Overview Page

Step 1: Update Application Parameters & Save

Figure 35: System Settings Update Confirmation & Notification

13. Help Center & Interactive Tutorials

13.1 Tutorial Library & Offline User Manual Downloads

Access interactive operational guides, module walkthroughs, and download updated PDF User Manual releases.
